-I- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,
MIP-1-beta and RANTES and subsequently transduces a signal by
increasing the intracellular calcium ions level. May play a role
in the control of granulocytic lineage proliferation or
differentiation.
-I- SUBCELIULAR LOCATION: Integral membrane protein.
-I- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                     15-UTL-1998 (Rel. 36, Created)
15-UTL-1998 (Rel. 36, Last sequence update)
16-OCT-2001 (Rel. 40, Last annotation update)
C.C. chemokine receptor type 5 (C-C CKR-5) (CC-CKR-5) (CCR5).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        EMBL; AB015944; BAA31328.1; -.

"Mutations in CCR5-coding sequences are not associated with SIV carrier status in African nonhuman primates.";

AIDS Res. Hum. Retroviruses 15:31-391(1999).

-!- FUNCTION: Receptor for a C-C type chemobine. Binds to MIP-1-alpha, MIP-1-beta and RANTES and subsequently transduces a signal by increasing the intracellular calcium ions level. May play a role in the control of granulocytic lineage proliferation or differentiation.
                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

Thinary SIVEM isolates use the CCR5 coreceptor from sooty mangabeys
T naturally infected in west Africa: a comparison of coreceptor usage
of primary SIVEM, HIV-2, and SIVMAC.";
Virology 246:113-124(1998).
C. I PUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,
MIP-1-beta and RANTES and subsequently transduces a signal by
increasing the intracellular calcium ions level. May play a role
in the control of granulocytic lineage proliferation or
differentiation.
C. I SUBCELLULAR LOCATION: Integral membrane protein.
C. I SIMILARITY: Belongs to family 1 of G-protein coupled receptors.

16-C chemokine receptor type 5 (C-C CRR-5) (CC-CR-5) (CC-C HUV-1 fusion co-receptor) (CHEMR13) (CD195 antigen).
SUBCELLULAR LOCATION: Integral membrane protein. SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Eukaryoča; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

Sequence evolution of the CCR5 chemokine receptor gene in primates.";

Mol. Biol. Evol. 16:1145-1154 (1999).

-!- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,

MIP-1-beta and RANTES and subsequently transduces a signal by
increasing the intracellular calcium ions level. May play a role
in the control of granulocytic lineage proliferation or

differentiation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

"Sequence evolution of the CGR5 chemokine receptor gene in primates.";
"Sequence evolution of the CGR5 chemokine. Binds to MIP-1-alpha,
Mol. Biol. Evol. 16:1145-1154(1999).

-I-FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,
MIP-1-beta and RANTES and subsequently transduces a signal by
increasing the intracellular calcium ions level. May play a role
in the control of granulocytic lineage proliferation or
differentiation.

-I-SUBCELLULAR LOCATION: Integral membrane protein.
-I-SUBCELLULAR LOCATION: Integral membrane protein.
-I-SUBCELLULAR LOCATION: Integral membrane protein.
-I-SUMILARITY: Belongs to family 1 of G-protein coupled receptors:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Submitted (AUG-1999) to the EMBL/GenBank/DDBJ databases.

-I- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,

-I- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,

MIP-1-beta and RANTES and subsequently transdeduces a signal by

increasing the intracellular calcium ions level. May play a role
in the control of granulocytic lineage proliferation or

differentiation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               MEDLINE=98022612; PubMed=9359654; Zhang Y., Cao Y., Wang G., Hahn B., Zhang L., Carruthers C.D., He T., Huang Y., Cao Y., Wang G.,

M.Sequence evolution of the CCRS chemokine receptor gene in primates.";
M.S. Biol. Evol. 16:1145-1154 (1999).
-!- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,
MIP-1-beta and RAWTES and subsequently transduces a signal by
increasing the intracellular calcium ions level. May play a role
in the control of granulocytic lineage proliferation or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            EMBL, AF075445; AAUJ3027.1,

Zhang Y.-W., Ryder O.A., Zhang Y.-P.;

Sequence evolution of the CCR5 chemokine receptor gene in primates.";

Mol. Biol. Evol. 16:1145-1154(1999).

-I. FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,

MIP-1-beta and RANTES and subsequently transduces a signal by

increasing the intracellular calcium ions level. May play a role
in the control of granulocytic lineage proliferation or

differentiation.

-I. SUBCELLULAR LOCATION: Integral membrane protein.

-I. SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                            Trachypithecus francoisi (Francois' langur) (Indochinese langur).

"Chemokine receptor expression in cultured glia and rat experimental
allergic encephalomyeritis.";
J. Neuroimmunol. 86:1-12(198).
-!- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,
MIP-1-beta and RANTES and subsequently transduces a signal by
increasing the intracellular calcium ions level.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SUBCELLULAR Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                           Rattus norvegicus (Rat).
Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi;
Mammalia, Eutheria, Rodentia, Sciurognathi, Muridae, Murinae, Rattus.

Guo B., Kuno K., Harada A., Matsushima K.;
Submitted (JAN-1997) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,
MIP-1-beta and RANTES and subsequently transduces a signal by
increasing the intracellular calcium ions level.
-!- SUBCELULIAR LOCATION: Integral membrane protein.
-!- TISSUE SPECIFICITY: Detected in monocyte/macrophage cell lines,
-!- but nonhematopolatic cell lines.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              BY SIMILARITY.

Theogener of the chemokines MCP-1 and KC, but reverse transcriptase-polymerase chain reaction does not detect mRNA for the KC or new MCP-1 receptor.";
T. Anscriptase-polymerase chain reaction does not detect mRNA for the KC or new MCP-1 receptor.";
J. Neurosci. Res. 45:382-391(1996).
J. Neurosci. Res. 45:382-391(1996).
J. PUNCTION: Receptor for the MCP-1 (UE), MCP-3 (FIC) and MCP-5 chemokines. Transduces a signal by increasing the intracellular calcium ions level.

J. SUBCELLULAR LOCATION: Integral membrane protein.
J. TISSUE SPECIFICITY: Detected in monocyte/macrophage cell lines, but not in nonhematopoletic cell lines.

L. SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     "Molecular cloning and functional expression of murine JE (monocyte chemoattractant protein 1) and murine macrophage inflammatory protein lalpha receptors: evidence for two closely linked C-C chemokine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   EMBL; U47035; AAC52453.1; -.

--- INDOCTION: In animals in which experimental allergic encephalomyelitis (EAB) has been induced.
--- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 16-OCT-2001 (Rel. 40, Created)

Hum. Retroviruses 17:981-986(2001).
-!- FUNCTION: Receptor for the MCP-1, MCP-3 and MCP-4 chemokines.
Transduces a signal by increasing the intracellular calcium ions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         16-OCT-2001 (Rel. 40, Last sequence update)

SeyEBB-2003 (Rel. 41, Last annotation update)

C-C chemokine receptor type 2 (C-C CR-2) (CCR-2) (CCR2)

(Monocyte chemoattractant protein 1 receptor) (MCP-1-R).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  IsoId=018793-2; Sequence=Not described; -i- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CCR2 OR CMKBR2.

SOL N., Treboute C.CR3 chemokine receptor is a cell entry cofactor for HVV-2, but not for HV-1.";

FOR HVV-2, but not for HV-1.";

NICHOSY 240:213-220(1998)

-I FUNCTION: Receptor for a C-C type chemokine. Binds to ectaxin,

NCP-3, MCP-4 and RANTES and subsequently transduces a signal by increasing the intracellular calcium ions level.

-I SUBCELLULAR LOCATION: Integral membrane protein.

-I SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                               Margulies B.J., Hauer D.A., Clements J.E.; "Identification and comparison of eleven rhesus macaque chemokine

    J. Immunol. 161:547-551(1998).
    -!- FUNCTION: Receptor for the TCA-3 chemokine.
    -!- SUBCELLULAR LOCATION: Integral membrane protein.
    -!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.

"Cloning and differential tissue-specific expression of three mouse "Cloning and differential tissue-specific expression of three mouse beta chemokine receptor-like genes, including the gene for a functional macrophage inflammatory protein-1 alpha receptor.";
J. Bloi. Chem. 270:17494-17501(1995).
-I- FUNCTION: Receptor for a C-C type chemokine. Binds to ectaxin, MCP-3, MCP-4 and RANTES and subsequently transduces a signal by increasing the intracellular calcium ions level.
-I- SUBCELLULAR LOCATION: Integral membrane protein.
-I- TISSUE SPECIFICITY: Detected in skeletal muscle and in trace
                                                                                                                                                                                                                                                                                                                                 "Molecular characterization of two murine eosinophil beta chemokine

Harrington P.M., Newton D.J., Coleman J.W., Flanagan B.F.,
Submitted (JAN-1998) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Receptor for a C-C type chemokine. Binds to eotaxin,
MCP-3, MCP-4 and RANTES and subsequently transduces a signal by
increasing the intracellular calcium ions level (By similarity).
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- TISSUB_SPECIFICITY: Expressed in spleen but not in astrocytes or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      -!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.

AIDS Res. Hum. Retroviruses 17:981-986(2001).
-!- FUNCTION: Receptor for the chemckines SCYA1/I-309, SCYA4/MIP-1-
beta and SCYA1/TARC. My regulate monocyte chemctaxis and thymic
cell line apoptosis (By similarity).
-!- SUBCELUULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.

"Identification of the CC chemokines TARC and macrophage inflammatory
protein-1 beta as novel functional ligands for the CCR8 receptor.";

Eur. J. Immunol. 28:582-588(1998).

-!- FUNCTION: Receptor for the chemokines SCYA1/I-309, SCYA4/MIP-1-

beta and SCYA1/TARC. May regulate monocyte.chemotaxis and thymic
                                                                                                                                                                                                                                                                                                                                                        SUBCELLULAR LOCATION: Integral membrane protein.
SIMILARITY: Belongs to family 1 of G-protein coupled receptors.

-!- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-3-alpha/LARC and subsequently transduces a signal by increasing the intracellular calcium ions level.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             30-MAY-2000 (Rel. 39, Created)

"CDMA cloning of a G-protein-coupled receptor expressed in rat spinal cord and brain related to chemokine receptors.";

Neurosci. Lett. 169:85-89(1994).

-I FUNCTION: Receptor for the CX3C chemokine fractalkine and mediates both its adhesive and migratory functions.

-I SUBCELULAR LOCATION: Integral membrane protein.

-I SUBCELULAR LOCATION: Integral membrane protein.

-I ISSUE SPECIFICITY: Most abundant in adult spinal cord, brain, kidney, gut, uterus and testes.

-I PTM: This protein is not N-glycosylated which is unusual for G-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Rattus norvegicus (Rat).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     . .; TAS
Science 287:2274-2277 (2000).

-!- FUNCTION: Receptor for the CX3C chemokine fractalkine and mediates both its adhesive and migratory functions. Acts as co-receptor with CD4 for HIV-1 virus envelope protein (in viro).

-!- SUBCELLULAR LOCATION: Integral membrane protein.

-!- TISSUB SPECIFICITY: Expressed in lymphoid and neural tissues.

-!- DISEASE: Increased susceptibility to HIV infection and rapid progression to AIDS are associated with the Ile-249/Met-280 haplotype.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          V -> I (common polymorphism in Caucasian population). /FIId=VAR_010043.

calcium second messenger system. Can function as a chemoattractant homing receptor on circulating memory lymphocytes and as a coreceptor for some primary HIV-2 isolates. In the CNS, could mediate hippocampal-neuron survival.

--- SUBCENTURAR LOCATION: Integral membrane protein.

--- INSUE SPECIFICITY: Predominantly expressed in the thymus, in peripheral blood Leukocytes, including T cells, mostly cd4+ cells, and him platelets at lower levels, in the spleen and basophils, and in platelets at lower levels, in La-2-activated natural killer cells and skin-homing memory T cells, mostly the ones expressing the cutaneous lymphocyte antigen (CLA). Expressed in brain microvascular and coronary artery endothelial cells.

--- PTM: IN NATURAL KILLER CELLS, SCYA22 BINING INDUCES PROBABLY BY BENTA-ADRENBERGIC RECEPTOR KINASSE 1 AND 2.

--- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         MIN, 604836; -.

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).
-!- FUNCTION: RECEPTOR FOR A C-C TYPE CHEMOKINE. BINDS TO MIP-1-ALPHA,
RANTES, AND LESS EFFICIENTLY, TO MIP-1-BETA OR MCP-1 AND
SUBSEQUENTLY TRANSDUCES A SIGNAL BY INCREASING THE INTRACELLULAR
CALCIUM IONS LEVEL. RESPONSIBLE FOR AFFECTING STEM CELL

TISSUE SPECIFICITY: Detected in the heart, spleen, lung,
peritoneal exudate cells and leukocytes.
SIMILARITY: Belongs to family 1 of G-protein coupled receptors.

functional macrophage inflammatory protein-1 alpha receptor.";
J. Biol. Chem. 270:17494-17501(1995).
--- FUNCTION: Probable receptor for a C-C type chemokine.
--- SUBCELLULAR LOCATION: Integral membrane protein.
--- TISSUE SPECIFICITY: Detected in the spleen, liver and leukocytes.
--- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                    RMEL, 198405; AAA88154.1; -.
